Plan: config/plan.yaml
sites, budgets, test years
DRL1, its variants, DRL2, rules
experiments in three stages
analysis questions
ditrl run
any machine,
any shard
Running
train until the yield of the
training seasons stops rising
test the final policy on the test
years, record every decision
runs/
one folder
per job
Results
ditrl export
rebuilds the tables
of each experiment
results/
tables,
in git
result tables
ditrl report: after every batch of results
what changes what: each question
paired with DRL1 per seed,
bootstrap interval over seeds
figures and tables,
placeholders for
missing results
fill in the numbers of the
findings from the tables
central findings, written by hand
reports/ and README.md:
status, findings,
what changes what
